Company: Devexperts

Location: İstanbul

Category: other-general

Company Description

Devexperts has been working for nearly two decades consulting and developing for the financial industry. We solve complex technological challenges facing the most well-respected financial institutions worldwide.

By becoming a part of Devexperts, you'll become a part of a company that fosters self-improvement and actively seeks out-of-the-box ideas. Our teams work together to create the next generation of financial software solutions. We welcome all candidates who believe, as we do, that innovation is grounded in education.

Job Description

A young friendly team of Web Development department requires a developer to participate in new interesting projects of the company. We need people who are not afraid of complex independent tasks, keeping up with the times on the crest of advanced technologies used in the development of interactive web applications and portals.

We create a software product that can truly compete in the global market!

Our team develops rich Internet application in the field of financial markets. We follow trends and new tools, using Java 11, Kotlin, Spring stack, React, GWT, WebSockets, Canvas, TypeScript, RxJava/RxJs and more. We use Maven for building projects, Docker for testing and delivering, Webpack and Teamcity to automate builds, Cypress for running end to end tests, in-house tools for stress testing.

As a part of our team, you will:

develop new and improve the existing functionality of our rich internet applications

develop server side logic and develop client-server APIs (REST, WebSocket)

analyze and improve performance on both server and client side

work on improving development process and developer experience

work on improving observability and traceability of our components

communicate with designers, developers, business analysts and customers

Qualifications**What we expect from you:**

solid knowledge of fundamental data structures and algorithms

knowledge of design patterns, experience in system architecture development

strong understanding of REST APIs

experience consuming live streams of data using technologies like WebSockets or server-sent events

an understanding of performance in modern web browsers including reflow/repaint/composite in browsers, asset loading costs, etc.

understanding of JavaScript and how it works in modern browsers

basic knowledge of Spring stack

university degree

What will be your advantage:

good knowledges of HTML/CSS

experience in development of software for financial or brokerage business

experience in TypeScript is preferable

experience in GUI design

experience in RxJS, GWT, React

deployment experience with Docker, NGINX, HAProxy
