

Turkey Jobs Expertini®

Photovoltaic (PV) System Project Manager - Energy Industry Company

[Apply Now](#)

Company: Michael Page

Location: Istanbul

Category: other-general

Eklendi 28/03/2024

Industry Leading Energy Company

Opportunity to Become a Key Member in Renewables Industry

Müşterimiz Hakkında

Operating in Energy industry, our client is one of the biggest structures operating both in and outside of Turkey.

İş Tanımı

Formulate comprehensive designs and layouts for solar energy systems, considering project specifications, solar radiation levels, and available resources.

Continuously monitor the progress of solar projects, identifying potential design challenges, and implementing corrective actions to ensure peak system performance.

Utilize solar design and simulation software to conduct shading analyses and forecast energy production accurately.

Optimize the layout of solar panels and system configurations to maximize energy output and resource utilization.

Collaborate closely with the design team to develop tailored solar panel solutions that address the specific requirements of each project site.

Ensure adherence to safety regulations and technical standards throughout all phases of solar energy projects.

Develop detailed project plans and schedules, ensuring the timely achievement of milestones within budgetary constraints.

Coordinate installation activities to uphold the highest quality standards across all projects.

Supervise post-installation support and maintenance efforts, guaranteeing optimal functionality of all systems.

Manage project finances and resources meticulously, maintaining control over costs and resource allocation.

Provide regular updates on project progress to key stakeholders, including clients, vendors, and organizational leadership.

Aradığımız Profil

Bachelor's degree in electrical engineering or a related field, coupled with a proven ability to operate autonomously in the fast-paced energy industry environment.

- Deep expertise in designing solar energy systems, with a proficiency in utilizing solar design and simulation software tools such as PVsyst and PVcase, indicative of the capacity to navigate autonomously through the demands of the energy industry.
- Comprehensive understanding of solar energy technologies and system components, underscored by the ability to independently adapt to evolving industry dynamics.
- Strong leadership and communication skills, complemented by the capability to operate autonomously and effectively in high-pressure scenarios typical of the energy industry.
- Proven track record of utilizing project management tools like MS Project and Primavera, demonstrating the ability to manage tasks independently and efficiently within a fast-paced environment.
- Demonstrated capacity to thrive in a fast-paced, deadline-driven environment, highlighting the capability to autonomously manage workload and deliver results amidst dynamic energy industry demands.

Teklif Edilenler

Become a part of energy giant

Flexible benefits and work rights
