

Turkey Jobs Expertini®

Senior DevOps Engineer

[Apply Now](#)

Company: Oracle

Location: Turkey

Category: other-general

The Autonomous Database cloud service framework features APIs to handle all lifecycle management operations of databases. It also performs operations autonomously based on internal and external events. The team has the unique opportunity to make significant contributions to the full stack of Oracle technology, from database kernel to cloud service platform and to customer-facing portals.

You will be responsible for deploying fixes for the Autonomous Database service with a deep focus on architecture, production operations, performance management, deployment and release engineering. You will work with multiple cross-functional teams helping deliver new and outstanding experiences to our stakeholders while ensuring reliability and performance. The successful candidate will be expected to interface with both senior management and the various delivery teams across OCI and database security and compliance architecture team to define and maintain our compliance posture in an environment of increasing regulatory expectations and growth.

We are a dynamic and enthusiastic team with great emphasis on go-getters and proactive individuals.

Overview from with links to other collateral:

Preferred Qualifications:

At least a Bachelor's degree, in Computer Science, MIS or another technical field, or equivalent work experience.

Solid experience with Linux.

Experience troubleshooting complex software and/or networking issues.

Knowledge on Cloud computing architecture, primarily Identity, Compute and Networking

Expert level experience, understanding, implementation and troubleshooting of Oracle Database technology including RAC, Dataguard, ASM, RMAN preferred.

Development skills utilizing Python, shell, SQL, Terraform

Prior DevOps or continuous delivery and deployment experience preferred

Strong communication and analytical skills

Proven ability to quickly learn new technical domains and then train others.

As part of Oracle's employment process candidates will be required to successfully complete a pre-employment screening process. This will involve identity and employment verification, professional references, education verification and professional qualifications and memberships (if applicable).

In this role you will need to:

Operate and performs maintenance to cloud database services running within the region.

Assess, prioritize, and communicate risks and urgency to leadership and engineering teams

Take ownership of the implementation and production operations of a wide array of core system platform solutions

React to production deficiencies by continuously implementing automation, self-healing, and real-time monitoring to production systems

Ensure thorough documentation of incidents through company-standard reporting methods.

Stay informed of cloud infrastructure stacks
