Company: Udemy

Location: İstanbul

Category: other-general

About this role

Udemy's Analytics Engineering organization is a critical, strategic partner enabling Udemy Product and Business leaders to make vital decisions informed by rich, trusted data and analytics products and reporting. Our growing team is passionate about delivering high quality, user friendly data and analytics solutions to support Udemy's rapid growth and ever increasing need for data to run and grow the business.

As a Senior Staff Data Engineer, you will have the opportunity to partner with both business and technical teams to design and build data platforms and products balancing technical excellence and sustainability with the rapid delivery of mission critical decision making capabilities in a fast-paced environment.

What you'll be doing

Build relationships with key business, product, and engineering partners, align business needs with technical roadmaps and translate complex, ambiguous business problems into prioritized, outcome-based data and analytics initiatives.

Design, develop, and launch high quality, well-documented dimensional models and domain data products that accelerate business-critical decision making.

Act as an advocate and subject matter expert for Udemy business and data consuming teams to define and drive improvement and maturity of data and analytics products and their quality.

Provide thought leadership and collaboration with engineering partners to develop

sustainable cross functional data architectures and processes across the data lifecycle.

Stay current on industry and technology trends to identify and champion new approaches and innovation and continuously improve the quality, accessibility, and scalability of Udemy data platforms and products.

Provide mentorship and support to team members and colleagues and promote collaboration, growth, and adoption of best practices.

What you'll have

5+ years experience working in data engineering, analytics, business intelligence, data infrastructure or equivalent.

Deep experience in ETL development, performance tuning, and query optimization (DBT highly preferred).

Ability to design and implement high quality, standards-based data pipelines and dimensional data models.

Excellent SQL skills with experience building data warehouses in a production environment.

Experience with data platforms and tools such as Redshift, Hive, Spark, and Kafka.

Self-driven, highly motivated and able to learn quickly.

Strong communication skills to partner with business teams and to draft excellent requirements and non-technical data documentation.

We understand that not everyone will match each of the above qualifications. However, we also realize that everyone has unique experiences that can add value to our company.

Even if you think your background might not perfectly align, we'd love to hear from you!
