Company: CodiLime Location: İstanbul Category: other-general

Get to know us better

CodiLime is a software and network engineering industry expert and the first-choice service partner for top global networking hardware providers, software providers and telecoms. We create proofs-of-concept, help our clients build new products, nurture existing ones and provide services in production environments. Our clients include both tech startups and big players in various industries and geographic locations (US, Japan, Israel, Europe). While no longer a startup - we have 300+ people on board and have been operating since 2011

While no longer a startup - we have 300+ people on board and have been operating since 2011 we've kept our people-oriented culture. Our values are simple:

Act to deliver.

Disrupto grow.

Team up to win.

The project and the team

We are looking for an open-minded, passionate about new technologies, logically thinking person with a creative approach to solving problems. If you are eager to learn, if you like to design, deploy and troubleshoot network solutions, and if you want to automate repetitive work, we would like to offer you a great opportunity to grow with CodiLime. You will have a chance to join a team of specialists who know that every problem can be solved. We have already completed numerous projects in the field of networking, cloud or infrastructure automation and monitoring.

We are a team of DevOps, Network Engineers and Security Engineers with network automation experience who explore the world of SDN, NFV and work with top-notch cybersecurity solutions.

What else you should know:

Our engineers support projects from the automation development phase, through solution deployment and integration, to troubleshooting a working service

We collaborate closely with analysts, architects and developer teams

Our tech stack for the project includes various cybersecurity solutions, especially NGFW, SASE, and SIEM

We work on many interesting projects at the same time, so we may invite you for an interview for another project if we consider your competences and profile suitable.

Your role

As a part of the project team, you will be responsible for:

Automating SOC processes to improve the efficiency and accuracy of alert handling

Cooperating closely with the technical lead to ensure that creating playbooks meets customer requirements and is in line with the best practices

Sharing your knowledge and expertise during the design phase, ensuring the created playbooks are as concise and effective as possible

Cooperating with the technical lead to create a clear automation process for the customer's SOC

Sharing expertise around Automation best practices and playbook design

Assisting customers in connecting their security tooling to Cortex XSIAM

Using the Cortex Marketplace

Creating playbooks that reflect design intent and customer requirements

Where required, demonstrating playbooks, explaining various tasks

Explaining and demonstrating the value of integrations, offering support and setup

guidance

Cooperating with internal and external teams to ensure product adoption

Creating technical documentation detailing the SIEM aspects of the engagement

Do we have a match?

As a SIEM / SOAR Automation Engineer you must meet the following criteria:

4+ years of deploying and integrating SOAR or SIEM to the enterprise and large enterprise level

Ability to define, create and automate the SOC process through the use of playbooks

Knowledge of a scripting language (e.g. Python, Bash) to develop advanced custom integrations, automations for use in playbooks

Strong understanding of security concepts, frameworks, and compliance standards, with the ability to provide strategic guidance and recommendations

Advanced APIs knowledge and ability to integrate SOAR or SIEM with variety of security tools and infrastructure components

Knowledge in the field of incident response processes, including triage, investigation, and remediation

Strong communication (written and verbal) and presentation skills, both internally and externally

Fluent English is our requirement. Knowledge of any other language will be an additional advantage

Relevant bachelor's degree or industry recognized qualifications

Ability to read, understand and create technical design documentation

Willingness to work flexible hours (including maintenance windows in different time zones)

Please be aware that we process CVs written only in English / Polish, so kindly submit your CV in one of these languages

Beyond the criteria above, we would appreciate the nice-to-haves:

Knowledge of Palo Alto Networks solutions, especially Cortex XSIAM, XSOAR, XDM, Splunk

Experience with Version Control System

Experience with automation tools

More reasons to join us

Flexible working hours and approach to work: fully remotely, in the office or hybrid

Professional growth supported by internal training sessions and a training budget

Solid onboarding with a hands-on approach to give you an easy start

A great atmosphere among professionals who are passionate about their work

The ability to change the project you work on
