## Solution Designer - E2E Solution Design

[Apply Now](#)

Company: Vodafone

Location: Istanbul

Category: other-general

Your dream job does exist.

Discover it at Vodafone!

We are looking for a Solution Designer - E2E Solution Design

First things first: Our Brand.

Here are the key behaviours that help us bring our Spirit and Purpose to life:

- Earn customer loyalty: Small things do matter.
- Experiment, learn fast: Just take the chance.
- Create the future: That's possible.
- Get it done, together: It's up to each of us to make it happen.

Here, everyone can feel free to be themselves and express their ideas.

We are proud to have the most flexible #hybrid way of working in Turkey.

Together with your team, you can decide which days to come to the office depending on your work requirements.

Another favorite: Meeting-free afternoons! Every Friday, arrival of the noon means we can start to take it easy: spend time working on our personal development or catching up with our team. We call this #CumaKafası (Friday mood).

And yes we are Agile! The world is constantly changing. And we cannot afford not to!

Our journey began by simplifying our organizational model and transforming into a more agile structure that now we use extensively, especially in our development processes.

## **Why is this role really critical to us?**

- Lead and manage IOT Platform products/solutions' lifecycle, determine future opportunities for innovations/change/improvements and create communication channels in order to track user experience proactively
- Lead and manage feasibility and technical design to deliver companywide technical solution with effective management of processes and in line with agreed budgets
- After ensuring all end2end requirements of all parties are understood, deliver most appropriate solution that planned based on requested speed, quality and cost
- Contribute in planning and architectural design activities about related projects and products

## **How will you spend your time at Vodafone?**

- As a member of the squad, solution designer is responsible for all the activities that lead the team to achieve their sprint goals & team KPIs.
- Supports ideation and scoping processes for scoring, feasibility and complexity of the concepts.
- Estimates size of backlog items
- Provide technical and financial (CAPEX) information including effort estimation, constraints and dependencies; highlight potential risks and offer alternative solutions
- Delivers detailed functional and technical analysis against backlog items in line with solution designers in other squads; handshakes on the specifications of the integrations points.
- Deliver end to end solutions based on agreed scope of requirements, in line with Group and TR IT's target architecture and strategy.
- Together with Ops and Infrastructure teams, studies dimensioning for the systems in the domain based on the traffic forecast provided by the business unit
- Works with product owner and solution developer define backlog items (epics, features, user stories, tasks) for the necessary cases
- Supports testers for test case preparation; reviews test cases.
- Provides design support for defects and issues raised by relevant stakeholders regarding the domain under the teams responsibility.
- Execute RFP/RFQ/RFIs when it's required in projects and evaluate vendor technical capabilities against business requirements to identify products and/or services
- Works with solution architect to maintain product roadmaps and target architecture

- Reviews and approves vendor design documents; follow-ups vendor development.
- If assigned as a Lead Solution Designer, drives e2e design activities, ensures e2e quality of the delivery.
- Accountable for the technical vendor management based on the contract that is signed between Vodafone and the vendor.
- Work with relevant stakeholders (IT vendor management, IT Operation, Technology Security, Information Security, Legal teams) during the contract preparation phase in order to identify correct scope, KPIs, terms and conditions.
- Take necessary actions for the failing KPIs in order to improve performance of the vendor
- Contribute to Group business and technology plans,
- Follow up Group IT implementation recommendations
- Ensure delivery standards, methodologies, processes, and best practices are implemented to ensure efficiency.
- Research to stay abreast of current technology that will keep the team operating efficiently and effectively.
- Contributes developing long-range goals.
- Comply with VFTR's information security policy, standards and procedures, available under Intranet / Corporate Security Library,

**You are just the person we've been looking for, if you have:**

- Bachelor's degree from Computer Science, Engineering, Information Technology or any equal to education,
- Minimum 8+ years of solution analysis/design/development/engineering experience, 4+ years of working experience in IOT related projects. Further, the candidate should have at least 2+ years telecom experience.
- Keep herself/himself up to date on IOT businesses, data governance, and good data practices to provide better security and performance in this advancing technological world
- Has some basic understanding of embedded systems. Further experience in data management; programming languages (.NET, Java, or Python) ; embedded systems; network topologies; transport protocols; cloud computing; stream processing; analytics; and application development.
- Ensure the best possible performance, quality, and responsiveness of applications.
- Identify bottlenecks and bugs, and devise solutions to these problems.
- Deep understanding of interrelated enterprise application and integration (such as ESB &

API GW, Microservices etc.).

- Ability to translate business needs, IoT field use-cases into productized solution fully integrated into the enterprise.
- Deep knowledge of and preferably experience in IoT Platform, IoT Gateway, Industry applications and remote monitoring/control areas.
- Deep knowledge of Communication/IoT Protocols (MQTT/S, HTTP/S , Web Service, Restful/SOAP, WebSocket, AMQP, TCP/IP, LWM2M/CoAP etc.)
- Broad knowledge and understanding of technical analysis and design patterns
- In depth understanding of the full software development lifecycle
- Broad knowledge of software technology and development processes, particularly Scrum, Kanban, Test Driven Development, disciplined agile delivery and lean development
- Having experience in high scalability projects involving cloud-based infrastructure design and implementation
- Having knowledge in cloud technologies such as Microsoft Azure / AWS, Docker containers and Kubernetes
- Solid understanding of the Software as a Service (SaaS) model in online environment
- Having experience in creating/reviewing design documents such as CRD, HLD, LLD
- Very good level of English proficiency
